

Okular

Okular is a viewer which will display pdf, png, jpg, eps, djvu (= “déja vu”, this is an alternative to the pdf format) ... files. [For more information use the KDE applications icon in Firefox and search under “okular”.]

Okular has been pre-configured so that you can move back and forth, to the beginning or the end, or—at the bottom—to a specific page.

If you go ALT + T (or click on “Tools”) you can copy text from a PDF file and then copy into a text file.
